

## Database tube packaging

### 1. Paper rolls

As a simple packaging method for bulk tubes I simply use paper into which the tubes are wrapped. For labeling the paper I use the following tool (part of the database program):

### The print data can be entered manually:

- Select number of columns (2-4)
- Enter tube name and optionally further marking into the table
- (for example manufacturer, measured values)
- Print the sheet (button <manuell füllen und drucken>)

### An automatic labeling is also possible:

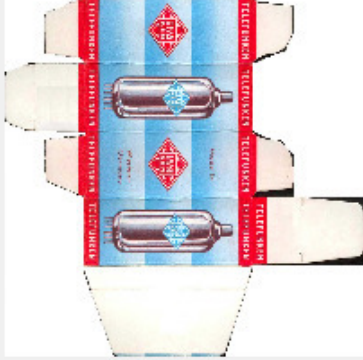

The form can be filled from the stock data base (tubestock.dbf). Select from the database list the respective tubes and press button <selektierte Datensätze drucken>. If desired a bar code (code 93) can be added to the print out.

## 2. Tube boxes

Those that do not like paper rolls can print boxes on suitable carton (without tube labeling). For that purpose I scanned some original tube boxes as printing templates.
