

### Self construction of tube sockets

Some tube sockets are rare or expensive. So for example a 4 pole Jumbo tube socket. The tube pins have a diameter of 5 mm. This corresponds to the diameter of the contacts of a 'Schuko' plug. So just take the contacts from the cheap 'Shuko' socket (two pieces are required). For the rest see the pictures:

*Socket and dismounted contacts*

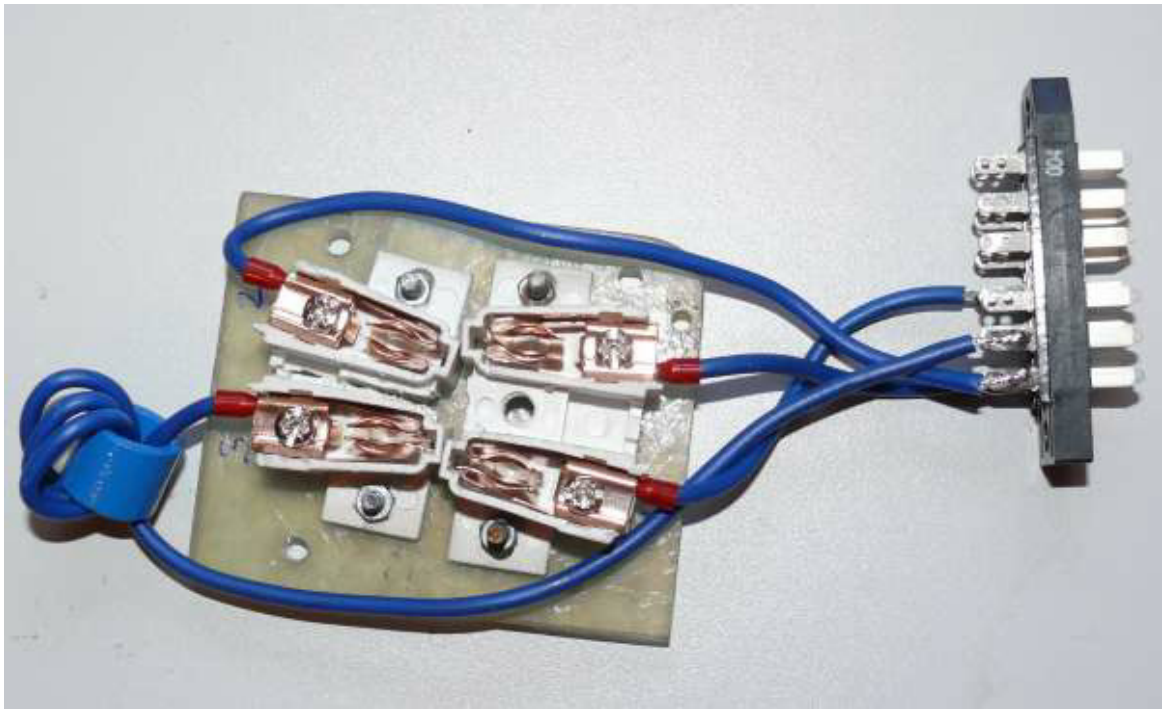

*The contacts are mounted to a piece of plastic*

*Tube inserted for testing*

*wired*

*mounted into socket box*
